SUMMARY

Entry-level cybersecurity candidate with hands-on experience in malware analysis, web application security, and network security. Strong foundation in Python, C++, SQL and Linux with a focus on threat assessment and incident analysis.

EDUCATION

Prasad V. Potluri Siddhartha Institute of Technology

Bachelor of Technology in Computer Science — CGPA - 9.04

Kanuru, Vijayawada

Jun. 2022 – May 2026

PROJECTS

Malware Detection Engine & Signature Triage | *Python, YARA, MalwareBazaar*

May 2026

- **Security Problem:** Mitigated the risk of undetected malicious binaries by developing an automated signature-based detection and triage pipeline to identify active threats.
- **Execution & Toolset:** Authored heuristic YARA rules targeting complex threat behaviors—including string obfuscation, anomalous import tables, and persistent execution mechanisms—packaged inside a custom Python engine using the `yara-python` wrapper.
- **Outcome & Capability:** Demonstrated hands-on capability in static malware analysis, signature engineering, and automated threat assessment to support rapid incident analysis during potential compromises.

Linux Telemetry & Host-Based Anomaly Monitor | *C++, Linux, POSIX APIs*

Feb 2026

- **Security Problem:** Addressed the need for low-overhead host monitoring to detect stealthy system anomalies and unauthorized resource consumption at the operating system level.
- **Execution & Toolset:** Engineered a high-performance C++ CLI tool that directly parses the Linux `/proc` pseudo-filesystem using optimized file I/O and POSIX APIs to ingest real-time CPU, memory, and process telemetry.
- **Outcome & Capability:** Demonstrated deep system-level architecture knowledge and the capability to build lightweight, host-based telemetry tools capable of identifying anomalous process behaviors for endpoint information security.

Layer 7 WAF Protection & Traffic Engineering | *SafeLine, Kali Linux, Docker, OpenSSL*

Nov 2025

- **Security Problem:** Defended vulnerable web applications against exploitation from critical OWASP Top 10 vulnerabilities, such as SQL Injection (SQLi) and Cross-Site Scripting (XSS).
- **Execution & Toolset:** Deployed a SafeLine Web Application Firewall (WAF) reverse proxy solution within a Dockerized environment, configuring Layer 7 defense mechanisms, custom firewall rules, rate limiting, and robust SSL/TLS encryption via OpenSSL.
- **Outcome & Capability:** Demonstrated hands-on execution in network security, Layer 7 traffic inspection, and proactive threat assessment of web-facing infrastructure.

SKILLS

Security Operations (SOC): Threat Assessment, Malware Analysis, Incident Analysis, Vulnerability Management

Tools & Frameworks: Wireshark, Nmap, YARA, NIST Cybersecurity Framework, Docker, OpenSSL, SafeLine

Operating Systems & Architecture: Linux (CLI, `/proc` telemetry engineering), POSIX APIs

Programming & Databases: Python (Security Scripting), C++ (Systems Programming), SQL

CERTIFICATIONS

- **Cybersecurity Professional Certificate** By *Google*
- **Azure Fundamentals - AZ900** By *Microsoft*
- **CCNA Certifications** By *Cisco Netacad*
 1. Introduction to Networks
 2. Switching, Routing, and Wireless Essentials
 3. Enterprise Networking, Security, and Automation
- **Introduction to Network Analysis** By *Security Blue Team*
- **Linux Fundamentals** By *HackTheBox*
- **The Cybersecurity Threat Landscape** By *Microsoft-Linkedin Learning*

ACHIEVEMENTS

- **Hands-on Labs:** Gained practical experience through hands-on labs on TryHackMe, HackTheBox, and LetsDefend.
- **College Ideathon:** Secured **2nd prize** for developing **Farm Connect**, an application connecting farmers and the consumers directly.
- **Quiz Week:** Organized and conducted a 6-day college quiz event as part of Student Council during Quiz Week 2025.
- **Notion Club:** Conducted multiple student-led events as a member of the **Lead Council** in the college's Notion Club.
